Define Your Technology Stack

The SECMS project is designed on the Salesforce platform. The stack below follows the technologies identified in the project implementation plan: Salesforce Lightning UI, Salesforce Flows, Salesforce Objects, Validation Rules, Approval Process automation, Reports and Dashboards.

S.No	Architecture Component / Layer	Technology Chosen	Justification / Purpose
1	Frontend / Client-Side	Salesforce Lightning UI	Provides the user interface for student, course, enrollment, instructor and administrative activities. Lightning pages, tabs and page layouts support a structured and usable application interface.
2	Backend / Server-Side	Salesforce Flows + Approval Process	Provides the application's process automation and business logic. Flows automate enrollment-related actions, while Approval Process supports enrollment approval workflows and reduces manual follow-up.
3	Database / Data Storage	Salesforce Objects	Stores centralized Student, Course, Enrollment, Instructor and related payment/reporting data. This supports the project's requirement for centralized and role-controlled records.
4	Cloud / Hosting / Deployment	Salesforce Platform	The SECMS solution is implemented on the Salesforce platform, providing the cloud environment for the Lightning application, objects, automation, reports and dashboards.
5	Version Control & CI/CD	Not specified in the project scope	The provided project material does not identify a specific version-control or CI/CD technology. Therefore, no unsupported tool is added to the project stack.
6	Third-Party APIs / Other Tools	No third-party API specified	The project scope does not specify an external API such as Stripe, Twilio or Google Maps. The documented solution uses Salesforce-native tools including Validation Rules, Approval Process, Reports and Dashboards.

Technology Stack Summary

Layer	Selected Technology
Frontend	Salesforce Lightning UI
Backend / Automation	Salesforce Flows and Approval Process
Database	Salesforce Objects

Layer	Selected Technology
Validation / Business Rules	Salesforce Validation Rules
Reporting	Salesforce Reports & Dashboards
Cloud Platform	Salesforce Platform

Source-alignment note: Version Control & CI/CD and Third-Party APIs were marked as not specified because the project material provided does not name a technology for those components.
