Performance Testing

Date	30 September 2026
Team ID	6ab2a81f009dcca3125ab2e5
Project Name	Student Enrollment & Course Management System (SECMS)
Maximum Marks	5 Marks

Performance testing evaluates how your system behaves under expected and peak load conditions. The SECMS project documentation records functional/performance testing evidence, but it does not provide measured load-testing metrics from JMeter, Locust, k6, or Postman. Therefore, those measurements are marked as not recorded.

Step 1: Testing Overview

Field	Details
Testing Tool Used	Salesforce native testing/configuration tools; no external performance-testing tool is recorded in the proje
Type of Testing	Functional & performance testing / system validation
Target Module / API	Student Enrollment & Course Management System — Enrollment processing, validation, approval, flows
Test Environment	Salesforce cloud / Developer Org
Test Date	September 2026

Step 2: Test Scenarios

S.No	Test Scenario / Description	No. of Virtual Users	Duration (sec)	Expected Outcome
1	Create Student with invalid email	Not recorded	Not recorded	Validation error displayed
2	Create Enrollment without Fees Paid and approve	Not recorded	Not recorded	Validation error displayed
3	Create Enrollment with Requested status	Not recorded	Not recorded	Approval process triggered
4	Create Enrollment and verify automation/dashboard	Not recorded	Not recorded	Enrollment date auto-filled; dashboard/report u

Step 3: Performance Test Results

S.No	Metric	Target Value	Actual Value	Status
1	Response Time (Avg)	< 2 seconds	Not recorded	Not recorded
2	Response Time (Max)	< 5 seconds	Not recorded	Not recorded
3	Throughput (Req/sec)	Not specified	Not recorded	Not recorded
4	Error Rate	< 1%	Not recorded	Not recorded
5	CPU Utilization	< 80%	Not recorded	Not recorded
6	Memory Utilization	< 80%	Not recorded	Not recorded

Remarks: The project document confirms successful testing of validation, approval, flows, reports and dashboard refresh, but it does not contain numerical response-time, throughput, CPU, or memory measurements.

Step 4: Observations & Analysis

• SECMS centralizes student, course, instructor and enrollment operations in Salesforce.
• Validation rules prevent invalid student email and approval without fee payment.
• Approval processing is triggered for requested enrollments.
• Enrollment date is automatically populated by a record-triggered flow.
• Instructor assignment is automated according to course category.
• Reports and dashboards update successfully according to the project testing evidence.
• Formal peak-load measurements and resource-utilization figures were not recorded in the supplied project.

Step 5: Screenshots / Evidence

Attach the available Salesforce evidence from the project: Validation Error, Flow Active List, Owner Change Proof, Reports, Dashboard, and Enrollment Owner Proof screenshots. The project documentation identifies these as testing evidence.

Source: Student Enrollment & Course Management System (SECMS) project documentation and supplied Performance Testing form.
